INDIVIDUAL ASSIGNMENT 2

My Name Is Personal Portfolio App

An individual React Native and Expo production build

Assessment detail	Requirement
Assessment type	Individual practical assignment
Technology	React Native, Expo and TypeScript
Final product	Personal portfolio app and independently installable Android APK
Total marks	100 marks
Issued	Thursday, 8 October 2026
Deadline	Monday, 12 October 2026 at 5:00 PM CAT (Africa/Kigali)
Submission	One ZIP file through the INES e-learning platform

Core identity requirement:

The first sentence on the Home screen must read: "My name is [student's full name]." The same sentence must appear in README.md and on page 1 of the UI and UX PDF. Replace the placeholder with the student's real name.

Application name. Name the app using the student's initials or a recognized nickname, followed by Portfolio. Examples: CMPortfolio, AlinePortfolio or IntarecPortfolio. Generic names such as MyPortfolio are not accepted.

Purpose and learning outcomes

This assignment turns the first classroom statement, "My name is…", into a complete mobile product. Each student will design, build, test and package a personal portfolio that runs as a standalone Android application without Expo Go. The work brings together the practical skills from Days 1 to 10 while keeping the scope small enough for an individual submission.

- Build responsive React Native screens with reusable TypeScript components.
- Manage controlled input, validation and visible application states.
- Use tab and stack navigation for a clear portfolio structure.
- Capture or select a profile image and handle permission denial or cancellation.
- Persist editable portfolio information locally and restore it after an app restart.
- Package and test an installable APK using an Expo EAS build profile.

Scenario

You are preparing for an internship, innovation challenge or first professional opportunity. A recruiter asks you to introduce yourself through a small Android application instead of a paper CV. Your app must work offline during the meeting, communicate your identity clearly and show evidence of what you can build. The

recruiter should be able to install the APK, open it without Expo Go and understand your profile within two minutes.

Individual verification code. Display MOB-A2-LLLL on the About screen, where LLLL is the last four digits of your registration number. The same code must appear on the handwritten card shown in the demonstration video.

Required application structure

No.	Feature	Minimum evidence
1	Home and introduction	Show the exact "My name is..." sentence, profile image or student-created avatar, professional headline, short biography and verification code.
2	Skills and education	Present at least five genuine skills and a concise education or training timeline using reusable components.
3	Project portfolio	Show at least two genuine student projects. Each project needs a title, problem, student contribution, technology used and a separate detail screen.
4	Profile editor	Provide controlled fields for headline, short biography, primary skill and availability status. Include at least three validation rules and field-level messages.
5	Navigation	Use bottom tabs for major sections and a stack route for Project Details. Back navigation must preserve the current session.
6	Profile media	Allow capture or gallery selection of a profile image. Show preview, replace and remove actions, and safe permission or cancellation feedback.
7	Local persistence	Save editable profile data and the selected local image reference with AsyncStorage. Closing and reopening the app must restore the saved profile.
8	Offline behavior	The core portfolio must remain usable in Airplane Mode. Clearly label any optional link or feature that needs a connection.
9	About and release information	Show app name, student name, registration number, verification code, version and a short data-use statement.
10	Standalone Android release	Produce and test an installable APK using EAS Build. The final demonstration must launch the installed app without Expo Go.

UI and UX design PDF

Submit a four to six page PDF named MOB_A2_REGDIGITS_UIUX.pdf. REGDIGITS is the registration number without a slash. The PDF must match the submitted application and remain readable at 100 percent zoom.

Page	Required content	Assessment evidence
1	Identity and concept	App name, "My name is..." sentence, student identity, intended recruiter and visual direction
2	User flow and information architecture	Tabs, project detail stack, profile editing, media selection and saved-state flow
3 to 4	Annotated wireframes	Home, Skills or Projects, Project Details, Profile Editor and required error or empty states
5	Visual and accessibility decisions	Color choices, typography, spacing, readable contrast, accessible labels and large-text behavior
6 if used	Implementation comparison	Final screenshots matched to the approved wireframes and explanation of justified changes

Technical requirements

- Use React Native with Expo and TypeScript. Use functional components and hooks.
- Use Flexbox and reusable components. The interface must remain readable on a narrow Android phone and with increased system text size.
- Use React Navigation with bottom tabs and at least one nested stack route.
- Use Expo Camera and/or Expo ImagePicker, with clear permission and cancellation handling.
- Use @react-native-async-storage/async-storage for fictional or low-risk class data only. Do not store passwords, tokens or sensitive personal records.
- Configure eas.json for an Android preview APK and set a unique Android package such as rw.ac.ines.ug2424671.cmportfolio.
- The submitted APK must install and run without Expo Go. A web build, screenshot-only prototype or Expo Go demonstration does not satisfy the release requirement.
- Do not include real secrets, private API keys, node_modules, .expo, build caches or unrelated files.

Personalization and originality

The app must reflect the submitting student. Content, colors, profile image or avatar, project examples, written biography and application name must be personally selected. Two submissions with substantially identical code structure, wording, visual design and evidence may be referred for academic integrity review. Starter libraries are permitted when clearly acknowledged and understood.

Marking rubric

Criterion	Marks	Full-credit evidence
Identity and assignment fit	10	Unique app name; exact "My name is..." statement; genuine student identity; verification code; coherent portfolio purpose.
UI and UX PDF	10	Complete flow, wireframes, accessibility decisions and visible agreement with the final application.
Layout and reusable components	15	Responsive Flexbox layouts, readable hierarchy, reusable cards or sections, empty states and large-text testing.
Navigation architecture	10	Working tabs and project-detail stack; correct parameter passing; reliable Android Back behavior.
State, input and validation	10	Controlled profile editor, at least three meaningful rules, field-level feedback and blocked invalid save.
Persistent local profile	10	AsyncStorage save, load, update and delete or reset behavior; data restored correctly after restart.
Camera or gallery workflow	10	Permission handling, capture or selection, preview, replace, remove and cancellation recovery.
Portfolio content and credibility	10	Five genuine skills, education summary, two genuine projects, clear personal contribution and no fabricated claims.
APK packaging and release testing	10	Installable standalone APK, unique package, working release build and documented physical-device tests including Airplane Mode.
Code, documentation and evidence	5	Organized TypeScript source, clear README, correct file naming, final commit hash, test log, disclosure and usable video.
Total	100	

Assessment gates

- No APK in the submitted ZIP: zero for APK packaging and all features that the assessor cannot verify in the installed application.
- APK cannot install or launch: zero for release testing and no functional marks for inaccessible features.

- Expo Go only: the submission does not meet the standalone release requirement.
- Missing or incorrect student identity, registration number or verification code: zero for Identity and assignment fit until ownership is resolved.
- The assessor will not repair paths, install missing project files, rename **artifacts or debug the submitted package.**

GitHub Submission

Each student must push the project to their **personal GitHub account**.

Name the repository:

MOB_A2_REGDIGITS

Example: registration number 24/24671 becomes MOB_A2_2424671.

The repository must be public or shared with the lecturer before the deadline.

Required Repository Contents

- README.md
- .gitignore
- package.json
- app.json
- eas.json
- tsconfig.json
- src/
- assets/
- docs/MOB_A2_REGDIGITS_UIUX.pdf
- evidence/MOB_A2_REGDIGITS_TEST_LOG.pdf
- evidence/MOB_A2_REGDIGITS_DECLARATION.pdf
- evidence/AI_USE.md

Do not push node_modules, caches, secrets or unrelated files.

GitHub Release

Create a final release tagged v1.0.0 and attach:

- MOB_A2_REGDIGITS.apk
- MOB_A2_REGDIGITS_DEMO.mp4
- Use meaningful commits throughout development. Only the submitted final commit and release will be marked.

README Requirements

The first line must be:

My name is [student's full name].

Also include the registration number, app name, purpose, features, setup and run commands, EAS build command, tested device, Android version, final commit hash, release link, APK link and known limitations.

Demonstration Video

Submit one continuous, unedited video of no more than two minutes showing:

1. A handwritten card with your name, registration number, app name and MOB-A2-LLLL.
2. The installed APK launching without Expo Go.
3. The "My name is…" introduction, portfolio and one project detail.
4. One validation error followed by a valid saved profile change.
5. The profile remaining saved after restarting the app.

6. The verification-card image preview.
7. The portfolio working in Airplane Mode and the device clock.

Moodle Submission

Paste the following in the Moodle assignment:

- Full name:
- Registration number:
- GitHub repository URL:
- GitHub release URL:
- APK download URL:
- Final commit hash:

Submit by **Monday, 12 October 2026 at 5:00 PM CAT**. Late changes or inaccessible links will not be marked.
